DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on July 2, 2004 has been entered.

Claims 1-52 are pending in this application.

Election/Restrictions

Applicant elected Group I, claims 1-20, 31-41, 43 (in part), 44-46 and 48-52, drawn to compounds of formula (I) wherein the NonAr ring is a nonaromatic 6-membered ring containing 1 ring nitrogen atom (i.e., piperidine), corresponding composition and method of use.

Claims 21-30, 42, 43 (in part) and 47 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention(s), there being no allowable generic or linking claim. Affirmation of the election was made **without** traverse in the reply filed on October 6, 2003.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 1624

Claims 1-20, 31-41, 43-46 and 48-52 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The following reasons apply:

1. In claim 1, in the definition of X, the recitation "X taken together with an adjacent bond is =O" is confusing. X is attached to the 6-membered nonaromatic ring via a single bond. It is not understood which 'adjacent bond' is referred to in the instant recitation. The specification does not provide any explanation and there are no examples illustrating the above feature.
2. The dependent claims recite "NonAr is a nonaromatic 6 membered ring containing 1 ring nitrogen atom" (see claims 2, 15, 31, 32, 33, 38 and 39) which is redundant because as per the independent claim the term 'NorAr' can only be 'nonaromatic 6 membered ring containing 1 ring nitrogen atom'. Deletion of the recitation in the dependent claims would obviate the rejection.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Art Unit: 1624

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-20, 31-41, 43-46 and 48-52 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-52 of copending Application No. 10/470,561. Although the conflicting claims are not identical, they are not patentably distinct from each other because they substantially overlap the generic compounds of the reference. The reference teaches a generic group of compounds that embraces the applicant's instantly claimed compounds, see formula (I) in claim 1. The reference compounds are taught to be useful as pharmaceutical therapeutic agents, see claims 48-52. It would have been obvious to one having ordinary skill in the art at the time of the invention to select any of the species of the genus taught by the reference, including those instantly claimed, because the skilled chemist would have had the reasonable expectation that any of the species of the genus would have similar properties and, thus, the same use as taught for the genus as a whole i.e., as therapeutic agents. One of ordinary skill in the art would have been motivated to select the claimed compounds from the genus in the reference since such compounds would have been suggested by the reference as a whole.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
